

## AT HOME AMONG WILD BEASTS.

Woman's Power Over Fiercest Denizens of the Jungle Instructively Demonstrated at the Exposition.

Philadelphia, Oct. 17.—Visitors at the World's fair in Chicago in 1893 are still talking of Hagenback's wonderful aggregation of trained animals, and the long engagement in New York immediately subsequent to the Chicago engagement is still fresh in the memory of thousands. It was during the New York engagement that this unrivalled entertainment became a society fad, and attracted the Four Hundred as freely as it did the street Arab of the east side.

The desire for excitement ever present in the human mind is fully gratified for the once by witnessing this unique performance. Beautiful young women in the midst of groups of ferocious Nubian lions, liable to be devoured at any moment, yet holding them in subjection by the exercise of the mystic power of the human mind over the wildest denizens of the jungle, strain one's interest to the highest tension and intensify excitement to the extreme pitch.

This show, as seen on the Esplanade of the National Export Exposition, has many new and original features made public for the first time at this engagement, and those who fail to see this high class performance will lose the opportunity of a lifetime.

Mme. Gertrude Charlotte Planka, known the world over as the "Lady of Lions," is the handsomest woman in her peculiar profession. Her life has been spent in constant companionship with the king of the jungle. She has tamed and trained more lions than any other woman who ever lived. Her will power is intense. It is that will power that makes her master of wild beasts. She lives for them, and declares she loves them, and her exhibition of Brutus, Spitz, Juliet, Brower and Sphinx is the finest example of lion taming ever seen in this country or Europe. Spitz, although exceedingly ugly, actually saved Mme. Planka's life on several occasions, and the thrilling exhibition of this accomplished and daring woman, entering the lions' den blindfolded, has won for her the highest celebrity wherever she has appeared.

Captain Cardono, the African explorer, assisted by Mme. Torontus and their noble train of full grown Barbary lions—Nero, Emerson, Gladstone and Leon—constitute an entire show in itself. The gymnastic feats, pyramidal acts, the poses and numberless variety of acts as arena performers of these ferocious animals indicate a marvelous degree of intelligence.

For fun making for the children, "Jolly," the reason endowed elephant, is introduced by Mr. Matt Johnson, London's leading animal trainer. The activity, speed and remarkable cleverness of "Jolly" have made him famous on both continents. "Jolly" is of such enormous size and strength that on his way across the American continent to the National Export Exposition he was used to do all the switching of the cars. He is very patient about his task of this kind, although not particularly fond of the work. Much of his time is spent in munching candy and popcorn and carrying the children around on his back. One of his greatest feats of strength is called the "tug of war," his competitors being 200 of the strongest men in the audience. At a policeman's feet in Regent's Park, London, four years ago, "Jolly" out-pulled 100 picked men, and at Madison Square Garden, New York, in 1895, he easily defeated 150 firemen, and had plenty of strength to spare. "Jolly" is the noted elephant ridden by his royal highness, the Prince of Wales, while hunting in India, and feels very of the decorations conferred on him.

Mlle. Cleo, the charming Hindoo snake enchantress, with a princely horde of beautiful reptiles, alligators and omanas, gives daily bold curling performances. Herr Alexia Canozo and his famous leaping Russian, French-Canadian and American wolves, coyotes and great Danes, are better than any of the traveling dog shows. Bobby Mack, America's premier clown, and his funny pantomime circus, introduces his group of clever dogs and monkeys. Mme. Marie Louise Maurell, the French animal expert, gives a beautiful and unique performance with her handsome and agile leopards and jaguars, the only trained specimens of their kind in the world. The famous boxing kangaroo, "Bob F.," and trainer, Dick Burge, of England, afford rare entertainment.

Hagenback's trained wild animal show never disappoints or deceives. It never offends good morals, never annoys good taste, and never displeases good people. It delights the little folk and affords diversion for the millions. It has more rare imported animals and presents a far greater fairyland of fun for the children than romance can offer. There seems to be no limit to the variety of zoological specimens that the management continues to introduce to visitors.

Mr. Frank C. Bostock, director general of Hagenback's, is one of the best known men in his profession on both sides of the Atlantic ocean. His mother was a Miss Wombell, whose father established the first menagerie in England as long ago as 1805. He is a master in handling wild animals, and has, at enormous expense, added to the exposition an educational and valuable source of entertainment, and the chief delight of more than half a million children.

Dewey's Olympia in Hemp. Philadelphia, Oct. 17.—Worked in hemp from keel to smokestack, a large model of the Olympia is one of the exhibits in the main building of the National Export Exposition. The display is part of the exhibit of a local manufacturing concern which gets its share of attention by keeping in the public's mind the achievements of Dewey and his gallant tars.

Both the raw product and manufactured articles have been employed in making the man-of-war a realistic representation of the original. Balls of wire, masts, heavy and thin rope, hemp in its original color and dyed articles, all enter into the construction of the vessel. Even "water" is reproduced realistically, as well as with artistic taste. Spun into the finest fibre the hemp is arranged with telling effect against the sides of the Olympia.

## FOR A BETTER COMMERCE.

Trade Representatives From All Over the World at the Philadelphia Exposition.

Philadelphia, Oct. 17.—Sessions of the International Commercial Congress are held daily in the Convention Hall of the National Export exposition, attended by representatives of trade and commerce from every quarter of the globe, to the number of 400. Countries Great Britain and Germany have sent their ablest representatives, their premiers in trade and commerce. Japan, in fact, represented by a score of such. Many of the delegates are here by the direct appointments of their home governments, and some of the greatest nations of the earth, in addition, show their sympathy with the objects of the congress through the presence of the diplomatic representatives accredited to the United States government at Washington.

The ceremonies incident to the formal inauguration of this distinguished convention were fittingly simple but impressive, consisting in a welcome from the national government, spoken by the first assistant secretary of state, Dr. David J. Hill, one in behalf of the city by the mayor, Samuel H. Ashbridge, with further addresses by the Hon. George F. Edmunds, formerly United States senator from Vermont, and the director general of the exposition, Dr. William Powell Wilson.

In this congress the American and Spanish sit side by side, the Briton and South African touch elbows, and the Jew and the Arab fraternize in the interests of commerce, and there is such a bringing together of men of various nations as to show that the world is really at peace with itself, so far as trade interests are concerned. The presence of these distinguished men from abroad gives to the exposition a cosmopolitan touch and lends additional interest for visitors, enabling them to study the dress and characteristics of their rivals beyond the sea.

Competitors in the field of commerce, a classification that comprises every individual who is affected by the production of the commodities of trade all over the world, from the wealthiest manufacturing corporation to the humblest employee of the farmer, under the skilled hand the soil is made to yield; those dependent upon the producer, whether for his products or the means for their purchase, will have a direct interest in the deliberations of the International Commercial Congress, and the great good that is certain as an outcome of this assemblage of trade representatives from the civilized countries of the globe will constitute one of the many achievements marking the advance of the United States among nations. The objects of the International Commercial Congress are in brief:

A discussion of the world's trade by men interested in its development. A meeting of minds representing all the varying interests of the world, and so harmonizing these interests as to provide a fund of information which will leave its effect on the foreign policy of every nation represented.

The regulation of foreign commerce in such a way as to provide for its greatest development consistent with native interests. A clearer understanding of conditions, such as may be afforded by a conference comprising specially accredited delegates from the governmental and business interests, each presenting in its best form the position and policy of its own country.

With the traditional aptitude for Americans to profit by such an interchange of ideas as must mark the proceedings of this congress, its influence will be of paramount importance to this country in expanding international traffic to the utmost possible extent in the face of fierce and unrelenting world competition.

While the exposition is teaching through the eye, the International Commercial Congress will convey information through the ear. Jointly, in connection with the exhibits of foreign samples, arranged by the Commercial Museums, they will leave on commerce, domestic and foreign, an impression that will be felt in better trade relations, new markets and an expanding of the old.

## Horse Collars Padded With Air.

Philadelphia, Oct. 17.—Horse collars filled with air constitute an exhibit at the National Export exposition of deep interest to persons to whom the noble horse appeals for kindly and humane treatment. The strength of the collar lies in the bending of an iron tube, upon which the entire collar is built. The iron tube is first covered with heavy felt to prevent any contact with the rubber air cushion. Outside this cushion another thickness of heavy felt is placed between the air bag and the outside covering, which is made of tough collar leather. The pads are air cushions, the air being condensed to a degree to sustain any load and adapt itself to any shape of shoulder, with the greatest ease and least danger to the horse. Its action is a rolling rather than a rubbing one. However great the pressure caused by the draft, when relieved of the same the collar assumes its normal shape, and presents only a small surface to the horse's shoulder, enabling it to coil immediately, thus preventing the galling of the shoulder. The trace attachments are secured to the collar and form part of it, and thus do away with harness.

## Ships That Shelled Cervera.

Philadelphia, Oct. 17.—Among the new and interesting exhibits at the National Export exposition are models of four of the great battleships which destroyed Cervera's fleet at Santiago. These models are perfect to the minutest details, and strike the eye beyond the line of bisected 13 inch shells, such as put an end to the flight of the Cristobal Colon, and which can be projected from the decks of the Oregon and ships of that character for a distance of 13 miles. These models are in the south pavilion of the Main building, and attract as much attention as any exhibit in the building. They are from the Cramps' shipyard, where the vessels were built, and their chief value and interest is in the accuracy and detail of their construction. A very interesting display of relics of the Spanish war, many of them from the harbor of Manila, and some of them from the heights of San Juan, is made in another part of the Main building.

## Important Notice.

Owing to changes made and to be made in our business we must demand of all who owe us that they come forward at once and settle their accounts. We have decided to adopt the cash system and have marked our goods down to cash prices. Hereafter we will sell for cash only, or for country produce.

THOMPSON, HOPKINS & CO. Oct. 3, 1899 East Tazewell, Va.

## ON THE GAY ESPLANADE.

Features of the Avenue of Amusements at the Exposition.

Philadelphia, Oct. 17.—The Esplanade is to the exposition what a garden is to food. Whilst there is not a dull spot in the acres of moving machinery and other exhibits, there is an animation, glamor and fascination about the Esplanade that appeals alike to the demure and gay, old and young, nabob and peasant. Melodians of brass bands mingle with rag time music as it is heard in the Orient, while as throngs pass up and down the great thoroughfare in kaleidoscopic procession the man with the megaphone and stentorian voice shouts the merits of the attraction he represents, and each has something to tell about that is interesting and either amusing or instructive, frequently both.

Being the Esplanade, above the center of which are many beds of shrubbery and evergreens, are: Hagenback's Aggregation of Trained Animals, so popular at the World's fair in Chicago and afterwards during a long engagement in New York city. Beautiful Jim Key, the educated horse, the equine world wonder, in his marvelous exhibitions of reading, writing, spelling, counting, figuring, changing money, using cash register, etc.

Chiquita, the smallest woman in the world, the little Cuban fairy, in her receptions every day and evening to throngs of delighted visitors.

A Chinese Village of 450 persons, brought direct from China especially for the exposition, with temple, theater, stores, workshops and houses, the whole producing a realistic effect, as though a street from some populous oriental city had been bodily transferred to the exposition grounds.

Edison's Electrical Fairy Land, a fascinating presentation of illusions and electrical novelties.

Moving Picture Show, reproducing with lifelike accuracy many interesting scenes, amusing and comical situations.

An Oriental Theater, Coffee House and Smoking Room, wherein, after sipping a delightful drink from a dainty cup, one may smoke the curious pipes of the far east and view the graceful dances of Oriental beauties.

The Old Plantation, where may be studied that interesting phase of slave life before the war, which is illustrated by a party of Georgia negroes, with songs, dances and the manners and customs of those days.

Glass Works in operation, showing every step of the industry, and the strange, fantastic and beautiful shapes the material takes under the breath of the expert blower.

## Ladies Love Jim Key.

Philadelphia, Oct. 17.—The following endorsement is the latest of many similar testimonials that have been given to Mr. Rogers, the owner of the beautiful Jim Key, by various humane societies throughout the United States: "We heartily endorse the marvelous exhibition of beautiful Jim Key, the educated horse, as an object lesson, showing what patience and kindness will accomplish in the teaching of animals, and how much more effective they prove than severity and cruelty, and we recommend to every one to take advantage of the opportunity to witness so remarkable a performance. (Signed) Caroline Earle White, president of Women's Pennsylvania Society for the Prevention of Cruelty to Animals."

Jim Key is still on exhibition on the exposition Esplanade, and some of the children of Philadelphia are going to be a few dollars richer by his presence. The Women's Pennsylvania Society for the Prevention of Cruelty to Animals has offered to the children of the public and parochial schools of Philadelphia a series of prizes, in value to the amount of \$100, to the children who write the best composition on the topic "Patience and Kindness," as exemplified in the exhibition of beautiful Jim Key. This wonderful horse is considered the grandest object lesson that the humane societies have had to present to the people to teach them that kindness and patience will accomplish much more than force and cruelty. Dr. Key, who taught beautiful Jim Key to read, write and spell, spent seven long years in patient, kindly treatment. When he was asked how he taught the horse to do all these wonderful things he said it was teaching, kindness, apples and sugar.

## Chiquita, the Cuban Fairy.

Philadelphia, Oct. 17.—An especial favorite at the National Export exposition is the little Cuban girl, Chiquita, whose daily receptions, in her own building, have been attended by a far larger number of people, it is said, than any other attraction, with the possible exception of the famous Hagenback trained wild animal show. Within the grounds since the exposition was opened, Chiquita takes great delight in frequent visits to Hagenback's, and enjoys flirting with "Chilly," the big, good natured elephant.

Chiquita is no freak, but a dainty, well dressed and accomplished lady of charming, refined manners. She is 23 years of age, and only 26 inches in height. Her weight is 17½ pounds.

Visitors to the exposition are delighted with her, and her pretty arranged reception parties are crowded daily with the ladies and children of the best families from all parts of the Union. At no other exposition was so small and dainty yet so beautiful, perfect, finely developed, the smallest, most charming little creature in the world, that every one feels they must see her upon visiting the Philadelphia exposition.

## The King of Squashes.

Philadelphia, Oct. 17.—There are a few things at the National Export exposition that command as much attention as the beautiful, chaste and ornate, the marvelous in mechanism or handiwork, the picturesque, grand or artistic. One of these is a member of the humble squash family. The squash being exhibited in the west end of the South Pavilion. And for size it stands alone in the history of squashes of its class. It weighs 345 pounds and is eight feet six inches in circumference.

Three lady visitors were weighed on the same scale with this squash, the combined weight of ladies and squash being 344 pounds, so that the squash is three pounds heavier than the three ladies. Served at any first class hotel or restaurant, this squash would meet the requirements of 2,500 guests.

## Save Your Money.

One box of Tutt's Pills will save many dollars in doctors' bills. They will surely cure all diseases of the stomach, liver or bowels.

STORY OF A GIANT AND A MIDGET One of the Amazing Contrasts to Be Found at the Export Exposition.

Philadelphia, Oct. 3.—There are nowhere more contrasts than can be found at the National Export exposition. There is shown the smallest bit of rolled steel, no bigger than a thumb, compared to a great rolled plate of steel more than ten feet high; a tiny railway, perfect in every detail and drawn by a 600 pound locomotive, as compared with a 50 ton passenger engine; a needle so small that it scarcely makes an impression between the thumb and finger, in contrast with a steel girder 30 feet long, and to cap the climax, there is to be found the tiniest piece of adult humanity in the world, compared with the elephantine proportions of an Ohio giant.

Joseph W. Grimes, the giant, is a bicycle rider, 30 years of age, who illustrates the strength of a particular wheel. He stands 6 feet, 5 inches in his stocking feet and weighs more than one-fourth of a ton—to be exact, 562 pounds.

This gigantic mass of flesh was weighed yesterday on the steel scales with the Cuban midget, Chiquita, who scarcely reached to the top of his boots and weighs less than his two feet. The calf of Giant Joseph Grimes' leg is 29 inches in circumference, and the pantaloons legs which cover this enormous part of his anatomy would entirely envelope and hide the little woman from view.

The smallest human adult at the exposition would not reach, with her hair dressed in pompadour fashion, to the hips of the exposition's biggest man.

The little woman has a head as big as a baseball; Grimes' head requires a No. 10 hat.

These two curious creatures illustrate the versatility and extremities of the export exposition.

RAILROAD BUILT FOR CHILDREN Its Train Hauled by a Six Hundred Pound Locomotive at the Export Exposition.

Philadelphia, Oct. 3.—The miniature railway at the Export exposition, which is operated on Vintage avenue, is the greatest children's plaything at the exhibition. The miniature railway is built for the use of the smallest steam railway train in the world. It uses coal for fuel, consists of ten passenger coaches, with a capacity of two people for each coach. The engine which hauls this wonderful little train weighs 600 pounds, as compared with the 200,000 pounds of an ordinary full grade locomotive. It is a faithful reproduction of the parts and workings of a full sized locomotive. It is a standard eight wheel American type, only five feet four inches long, 18 inches wide and 28 inches from the rail to the top of the smoke stack. The cylinders are two inches in diameter only. The passenger cars are five feet long and 22 inches wide. The train runs at a speed of ten miles an hour. The railway extends a considerable distance around the Main building, and is eventually to be extended entirely around the exposition grounds. The children have no end of fun on this little railway, and their mothers and nurses are able to extract as much enjoyment out of it as are the children themselves.
